

Good Morning Sir/Madam,

Thank you for giving me this opportunity.

My name is Muppana Chiranjeevi, and i am currently working as a Senior Systems Engineer at Infosys Limited with around 4.5 years of experience in Automation Testing.

In my current role, I have been involved in developing and maintaining automation frameworks, executing test scripts, identifying defects, and ensuring the overall quality of applications.

I have strong experience in Selenium WebDriver with Java, TestNG, REST Assured, API Testing, Jenkins, CI/CD integration, and defect management using JIRA.

Currently, I am working on Microsoft Dynamics Automation Testing, where I designed and maintained automation frameworks and automated more than 300+ test cases using Selenium WebDriver, Java, and TestNG, which reduced regression testing time by nearly 40%.I also integrated the automated test suite with Jenkins CI/CD pipelines, which allowed scheduled and trigger-based execution without manual intervention.

I completed my B.Tech in Civil Engineering from MVGR College of Engineering with CGPA of 8.9.

Overall, I am passionate about improving software quality through automation, continuous testing, and effective collaboration with cross-functional teams.

Currently, I am looking for new opportunity where I can further enhance and contribute my skills, take on new challenges, and grow as a Test Automation professional.

Thank You.

How?

Earlier, regression testing was done manually, which was time-consuming and required significant effort for repetitive test cases.

To improve this, I identified stable and high-priority regression scenarios in Microsoft Dynamics and automated them using Selenium WebDriver with Java and TestNG.

I have gained valuable experience in my current organization and I am truly grateful for the opportunities and support I have received. At this stage of my career, I am looking for better growth opportunities where I can work on more challenging projects, enhance my technical skills further, and grow professionally.
